Long-acting reversible contraception device inventory and separate inpatient reimbursement

Empire BlueCross BlueShield HealthPlus (Empire) members have the benefit of immediate postpartum placement of long-acting reversible contraception (LARC) intrauterine devices and etonogestrel implants during their inpatient delivery admission.

Payment for LARC devices and professional insertion fees are paid separately from the inpatient admission. Facilities and providers receive the same reimbursement as if the device were implanted on an outpatient basis.

To help ensure the devices are accessible to physicians and immediately available to patients who request this procedure, hospitals are encouraged to stock obstetrical units with the LARC devices listed below:

LARC devices
Intrauterine copper contraceptive
Levonorgestrel-releasing intrauterine contraceptive system, 13.5 mg
Levonorgestrel-releasing intrauterine contraceptive system, 52 mg, three-year duration
Etonogestrel (contraceptive) implant system, including implant and supplies
Levonorgestrel-releasing intrauterine contraceptive system, 52 mg, five-year duration
Levonorgestrel-releasing intrauterine contraceptive system, 19.5 mg, five-year duration (Kyleena)

We appreciate your assistance in this endeavor and look forward to working with you to ensure the success of the program for your hospital and your patients.
